

**Deskilling  
in bringing tape binding process**

## Automatic differential feed ratio switching

Auto setting for differential feeding ratio  
according to the fabric elasticity

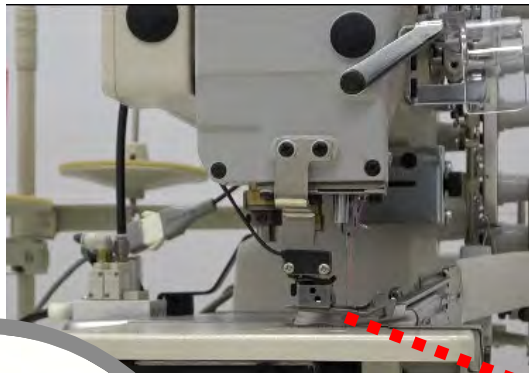

Less feeding ratio  
on horizontal part

More feeding ratio for vertical part

Thanks to the differential feed ratio regulator (AI), the differential feed ratio can be automatically switched by stitch counting, so this machine sews the fabric uniformly in any direction, wale, course or bias.

Touch panel operation

Supported machine

Oil Barrier type, tape binding, attaching elastic lace  
Flatbed interlock stitch machines
